OBJECTIVE

Fourth-year Software Engineering student with hands-on experience developing AI models, onboard computing systems, and simulation tools for aerospace mission scenarios through NASA RASC-AL and collegiate rocketry programs. Seeking a software engineering internship in the aerospace industry to contribute to mission-critical systems, flight software, and simulation platforms.

EDUCATION

University of Puerto Rico, Mayagüez Campus

Expected Graduation: May 2028

Bachelor of Software Engineering — GPA: 3.68/4.00

Relevant Courses: Software Engineering, Computer Architecture, Data Structures, Algorithm Design and Analysis, Computer Foundations.

WORK EXPERIENCE

Collins Aerospace, Software Engineer Co-op

June 2026 – Present

- Designed and implemented CORA, an AI-powered code review plugin integrated into Collins Aerospace's internal developer platform, supporting 8–10 programming languages with an extensible architecture for adding more; built concurrent batch processing (3 files/batch) to optimize review speed and deliver automated code quality and security feedback within seconds.
- Developed an internal automation platform designed for company-wide adoption across Collins Aerospace's engineering organization, consolidating multiple workflows into a single interface to reduce tool-switching for developers.
- Built and integrated 2 REST API endpoints powering two distinct AI-assisted features that help developers generate software feature specs and user stories, reducing manual documentation effort.

SPARC: NASA RASC-AL, Power Electrical System Division Member — Mayagüez, PR

August 2025 – Present

- Developed artificial intelligence models and onboard computing systems for decision-making, navigation, and system control.
- Built and analyzed simulations to validate proposed solutions, ensuring they met the objectives of multiple mission scenarios.
- Performed research on the implementation of a mobile propellant depot on the moon.

DRACO Rocketry Team, Recovery Division Member — Mayagüez, PR

August 2024 – May 2025

- Assembled and prepared the rocket's avionics bay and other components of the recovery system before each launch.
- Performed simulations and tests to ensure a safe and successful recovery.
- Researched methods to optimize rocket efficiency and safety.
- Designed, built, and evaluated the recovery systems for the DRACO rocket.

SKILLS

Languages & Frameworks: Python, C++, Java, TypeScript, YAML, Dart, Flutter, React, Next.js, HTML, CSS, LaTeX.

Tools & Platforms: OnShape, Blender, Cubit, Android Studio SDK, Microcontrollers, GitHub, Figma, Canva, Microsoft Windows OS, Mac OS, Linux.

Core Strengths: Agile Methodology, Software Development, Strategic Planning, Leadership, Adaptability, Research.

Languages: Fluent in Spanish and English

PROJECTS

Personal Portfolio

React, Next.js

- Built a portfolio site compiling all software projects, showcasing development skills across mobile, web, and backend technologies.

Fractals Generator

C++

- Developed a C++ application that generates and visualizes fractal patterns such as the Sierpinski Gasket and Menger Sponge.

Movie Searcher

Python

- Built a Python application that connects to an external movie database API, allowing users to search films and retrieve detailed metadata including genre, cast, release date, and ratings.

LEADERSHIP & COMMUNITY ENGAGEMENT

Student Mentor, University of Puerto Rico, Mayagüez Campus

2024 – Present

- Provide orientation to incoming university students and address questions about university life.

Member, National Honor Society — Puerto Rico

2020 – 2023

- Served as Capitular Secretary, 2021–2022.
- Developed leadership, service, teamwork, and character through sports tournaments, cultural activities, and conventions.

Volunteer Experience

2017 – Present

- Delivered food, supplies, and first aid to low-resource and homeless individuals; participated in beach clean-ups and other nature conservation efforts.
